

ADD REMOTE DATA CAPABILITIES TO YOUR DIGIFOBPRO

Send Digital Tachograph data from anywhere

digigprs connects to your digifobpro via the standard digifobpro serial cable and allows you to send Vehicle Unit and Driver Card data from anywhere including directly from your vehicle.

digigprs is supplied with a 12 volt vehicle power cable for remote vehicle use and can also be powered using your digifobpro charger.

Support for digigprs

Your digifobpro must be configured to send data to a recognised digicentral server. digicentral is the proprietary software used for remote connection of all Tachosys devices. digicentral can either be configured on your own server or supported by a third party provider. Current UK providers include; The FTA, Tachomaster, Tachodisc and Exentra.

Go to 'www.digifob.com/providers.php' for more information on participating providers.

SIM card support

digigprs provides support for all major SIM card providers.

- Power and Activity LEDs
- Compatible with all SIM cards
- GPRS data transfer
- In vehicle adapter supplied
- Send new or selected files
