Key Features

- New 2024 design now with 32 slots in place of 20
- Remotely authenticate for tacho remote download
- Full RGB indicator lights to locate and troubleshoot
- digicard-resort software for easy management
- Intelligent authentication for up to 1000 vehicles per company card

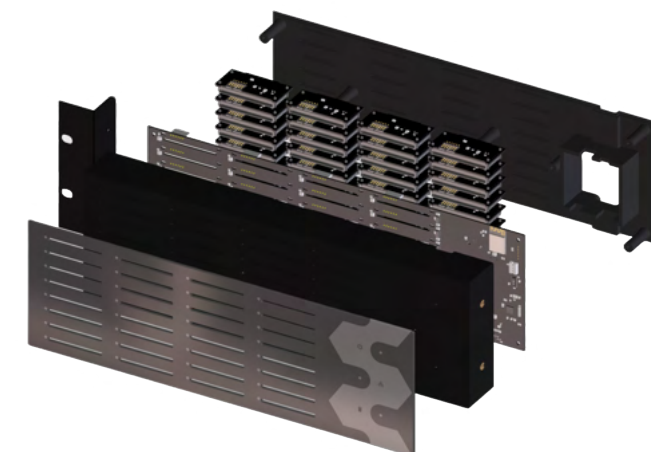

Hosting Multiple Company Cards

The digicard-hotel has 32 tachograph company card slots to provide the remote authentication (unlocking) of tachographs required for tachograph remote download.

In this latest version the DCH03 has increased its capacity by 60% (from 20 card slots to 32) whilst keeping the same front surface area whilst slimming out with a significantly reduced depth. Its size makes it perfect for fitting into rack drawers or even to replace its predecessor the DCH02.

With full RGB indicator LEDs we have made the everyday use and troubleshooting as simple as possible. With different colours for status, identification and warnings, it's now easier to identify issues and locate a company card.

Being able to rely on our own custom firmware gives us greater flexibility and control when making customisations and firmware updates and also ensures that we maintain the security of the device and its communications.
